

Flood Insurance

Excess flood has never been so critical—even in locations where it was previously thought unnecessary. It's also critical that agents inform their clients about excess flood. A number of excess flood related lawsuits have been filed against insurance agents in the wake of last year's hurricane season. One example: A couple from New Orleans with more than \$1 million in uninsured home losses from Hurricane Katrina. They sued claiming their agent did not tell them they could have bought additional coverage. Don't leave your clients without one of the most important pieces of coverage available today.
